Visit: www.alumcenter.net for more information

The new removable panel system from Alumcenter Inc. has been designed to protect your pool and patio enclosure from high hurricane winds.

Our system is a very easy and inexpensive way to protect your investment by allowing the removal of the screen frame of your enclosure when there is a hurricane threat, and return the panels when the hurricane has moved out of the area. Our removal screen panel allows the circulation of hurricane winds to pass through your enclosure, which is the major reason for pool enclosures to collapse and the cause of expensive damages.
